

HUNTER® ICC NOW OPERATES WATERMATION DECODERS

Old Watermation TW2 controllers with up to 48 stations may now be replaced by the ever-popular Hunter® ICC fitted with an Underhill decoder adaptor module made by Tonick Watering.

The module, retailing at just £328, together with the Hunter® ICC-800-PL at around £170-£250 makes a very economic controller for smaller systems already using Watermation or Tonick Watering decoders.

The Hunter® 8 way module (ICCM-800) fitted in the controller should be removed and replaced with the TRN/ICC/2W module (illustrated). This will immediately convert the plastic-cased 32 station ICC to 48 Watermation or Tonick 2 wire decoder stations

The combination, noted for its simplicity of operation, requires no grounding along the 2

wire path, except one at the controller.

Using programs A, B or C at the same time as program D, will allow 2 Tonick decoders to operate simultaneously.

The Hunter® ICC-800-PL controller and TRN/ICC/2W module may be purchased from irrigation installers. For a list, please refer to <http://www.tonick.co.uk/wholesale.asp> or phone 01386 41212 for suggestions. Alternatively, if an installer is not usually used, please ring 01491 202010 or use your search engine with “Hunter ICC Controller”. The module is also available directly from Tonick Watering Ltd.

Tonick Watering also make the largest range of irrigation decoders in the world. Please look at www.tonick.co.uk for more details and retail prices.
